Makers of the Award-Winning Cascade Server content management software

My CMS Is Totally RAD - Rapid Application Development

Tuesday, September 25, 9:00 - 10:30 AM

[View session slides](#)

In this session, we will look at how Cascade Server can be used as a framework for Rapid Application Development. David Klanac will explain how using XML-based data definitions and XSLT can provide an application with a means for data collection that would require minutes of developer time rather than hours to create and ensure easy future modifications as company needs grow and change. In addition to covering the basics of RAD, David will be discussing Cascade Server's ability to continue to meet internal application needs and the ability to continually improve upon this innovative CMS.

About the Speaker:

As Services Director, David Klanac manages consulting services for clients' new Cascade Server implementations. He provides product expertise and knowledge of complex implementation tasks to simplify and streamline clients' training, use and ownership of the solution.

David has also served as product manager, web developer and system integrator at the company. Prior to Hannon Hill, David provided web design and development services to various corporate clients as an independent contractor.

David is a member of the Technology Association of Georgia, and a proficient programmer in XML, PHP, ASP and ASP.NET. He holds a bachelor of business administration degree in management information systems from the University of Georgia.
