Makers of the Award-Winning Cascade Server content management software

I Survived My First Week at Hannon Hill and All I Got Was This T-Shirt

By

Thursday, October 5th, 2006 at 2:44pm

Greetings from Jeremy – a.k.a. the New Guy. My first day working at Hannon Hill was the day of the User's Conference – talk about baptism by fire! Actually, it was an awesome experience – it gave me a great perspective on what this company is all about. And since I'm in the support and services department, I really enjoyed getting to meet some of the people I'll be supporting. I really appreciate the wonderful sense of community among Cascade Server users - that's important in making any product a success.

I know a lot of you out there are fairly new clients, and since I too am just becoming familiar with the software, I thought I'd take this chance to share some resources I've really found helpful (I mean other than just yelling "hey Tim, can you look at this?"):

- [Technical Intro Guides](#) – It's kind of a running joke around the office – everyone here, from developer to receptionist starts off going through these guides so that everyone in the company knows what Cascade Server is all about, and how to integrate a site. Even if you're an old pro though, it never hurts to brush up on these.
- [Cascade Server Forum](#) – If you're not using the forum yet, it's time to start! It's a very active forum for both users and Hannon Hill staff, and there's a wealth of tips, tricks, and code snippets that are worth borrowing.
- [Knowledgebase](#) – Ok, so you're probably already using the knowledgebase, but did you know there's also a printable [PDF version of the User's Guide](#)? There's also a ton of PHP code on there under the [CAST \(Cascade Advanced Server Toolkit\) Section](#) for anyone looking to expand their implementation. It's worth checking out!

What a Great T-Shirt!
