Makers of the Award-Winning Cascade Server content management software

Hannon Hill's New Web Content Management Solution Delivers Powerful Site Management Features

>> New Cascade Server 4.6 Version Increases Users' Web Site Capabilities with Multiple-Language Product Interface, Faster Publishing Speeds, and Improved Audit Trails & Workflow

ATLANTA – OCTOBER 9, 2006 – Hannon Hill Corporation, makers of web content management solutions for mid-sized organizations including education, healthcare, technology and publishing, today announced the release of Cascade Server Version 4.6. The company is unveiling the new version at EDUCAUSE 2006, the premier technology event in higher education, taking place October 9 – 12 at the Dallas Convention Center.

Cascade Server 4.6 gives customers increased functionality and features including faster publishing speeds and better reporting, additional enhancements to the web services API for audit trails and workflow interaction, and an improved configuration interface.

Guided by a customer-driven roadmap, Hannon Hill has continued to consistently release new features and enhancements including an expanded web services API, a multilingual product interface, and more flexible options for customizing access rights.

“Taking user feedback heavily into account with our new product releases, and allowing clients to vote on features to guide our roadmap means we never lose sight of what our clients really need,” said Hannon Hill President David Cummings. “The improvements we’ve made in the past few months are particularly exciting because we’re now able to provide a robust web services API to allow our product to be integrated even more tightly with existing systems. It’s really taking Cascade Server, as a product, to the next level, and more importantly, it heightens our customers’ content management capabilities to better manage and work with their websites.”

About Cascade Server

Cascade Server is a powerful web content management (WCM) solution that gives people the freedom to manage their Internet, Intranet, Extranet and Portal content with ease. Designed around XML and for any network environment, Cascade Server is accessible through any Internet-connected browser and is as easy as email. Unlike current WCM solutions, Cascade Server helps organizations maintain a higher quality, standards-compliant web site, while providing deployment flexibility, a zero footprint client and implementation in less than a month.

Cascade Server makes it possible for web managers of any department or user-level to manage a complex website with ease and efficiency. The solution automatically replicates a consistent look throughout the site and content is separated from design, so users can change the look easily, without redoing an entire website. It also allows faculty to update their own pages in a user-friendly interface.

Cascade Server prevents content from being published without the proper approvals as content can be channeled through a workflow procedure to ensure errors don't slip through the cracks. By keeping all content in one central location and automatically publishing to the web a camera-ready copy, the WCM solution manages information, like institutions' course catalogs, with minimal difficulty to the user, and also avoids the redundancy of information often resulting from older publishing processes.

Higher Education Market Embraces Cascade Server

As an answer to higher education's content management challenges, Hannon Hill's Cascade Server has been a popular choice for many industries, especially education, because it works on any operating system, can be accessed from any browser, and organizations can implement the solution in less than a month. The solution places no restrictions on the number of users, amount of content, or number of sites that can be managed with one instance.

Since January 2006, the following higher education institutions selected Hannon Hill's Cascade Server to solve their WCM needs: Belmont University, Bowdoin College, Brandeis University, Campbell University, Carnegie Mellon University, Clemson University, Concordia College (MN), Cornell College, Eastern University, Gardner-Webb University, Harvey Mudd College, Heinz School of Public Policy, Hofstra University, Michigan State Law School, Plymouth State University, Queen's University School of Business (Canada), Saint Joseph's University, Southwestern Oklahoma State University, University of Detroit Mercy, University of Missouri – Columbia, University of Richmond, Vassar College and Willamette University.
